

SC21 Quality Management System Gap Analysis

Overview

The 'AS 9100' family of standards are based on ISO 9001, with additional requirements and interpretations specific to the aerospace industry. The emphasis is placed on areas considered to have the greatest impact on reliability, safety and regulatory compliance for aerospace products.

Whether you are a manufacturer, maintenance provider, stockist or distributor working in the aerospace sector we can offer a gap analysis service to help you understand the status of your current systems against the requirements of the relevant part of the standard.

Gap Analysis: 1 day on-site

The gap analysis service comprises of a one day on-site review of an organisation's current Quality Management Systems against the relevant part of the AS9100 series.

Prior to the visit a qualified Industry Forum advisor will contact you to plan the visit and ensure availability of the key personnel to facilitate the gap analysis.

The on-site visit will focus on the review of the current systems by discussion with the organisation's Top Management team and relevant process owners.

At the end of the gap analysis the advisor will give a verbal feedback to the Management Team on the findings of the visit.

This will be followed up by a comprehensive report highlighting the issues found. The report gives an ideal basis for an organisation to develop a comprehensive implementation action plan. Industry Form will then be able to provide any further specialised support or training to help address any issue found

Further Information

For further information, please visit our web-site at www.industryforumaerospace.co.uk where a detailed product 'flyer' is available (downloadable) for the above event or contact:- Karl Smith – Head of Aerospace & Defence Programmes (Industry Forum) karl.smith@industryforum.co.uk or **07887 562833**
